Dash Gold

Dash Gold is an ERC20 token created on Ethereum blockchain, Dash Gold brings real time transactions with secure connections.

We bring fast and better secure transaction, Bitcoin need more than 5 minutes to be confirmed by the network, unlike Bitcoin, Dash Gold need only a few second to be confirmed, Ethereum blockchain ensure all transaction is secure and private.

With a limited supply of only 4 mio DASHGOLD tokens, this is the most exclusive ERC20 token available anywhere in the world. Coin Features DASHGOLD is proud to be an ERC20 token, based on the Ethereum network. The ERC20 standard makes tokens easily interchangeable. By following the ERC20 protocol, DASHGOLD can be stored and secured in many different wallets, such as MyEtherWallet.com, Parity and others.

Limited Supply No other ERC20 token comes close to this small of a supply. In fact, many cryptocurrencies have an unlimited supply.

Most cryptocurrencies have a problem with centralized ownership, where the majority of tokens are owned by a small group of people. While people often point to Bitcoin when this issue comes up, the most obvious example is another coin which have unlimited supply. This company may choose to sell its supply which could crash the coin price at market. DASHGOLD was specifically structured in a way to avoid centralized ownership.

Why Dash Gold ?

- **Instant Send** (instant transactions). In contrast, Bitcoin takes about 10 minutes to confirm a payment.
- **Private Send** (anonymous transactions). In contrast, Bitcoin transactions are totally public and traceable. Only the identity of the addresses is anonymous.
- **Decentralised Governance** (masternodes govern, while the blockchain funds development). In contrast, Bitcoin is controlled by a few big miners and funded by 3rd party centralised institutions with self interests.
- **Dash Evolution** is a decentralized payment processor (think a decentralized Paypal).
